

Henrob Die Kit

Library of self-piercing rivet upset dies to broaden the selection of dies and joining options in your test lab

Atlas Copco

Industrial Assembly Solutions

We are pleased to offer this collection of Henrob dies for self-pierce riveting. Organized in a secure carrying case, this expansive library of standard and specialized upset die cavities expands the joining options for both current and future advancements in material selection.

Key benefits:

- Have the full range of 114 commonly used dies readily at hand in a professional case
- Be fully prepared to cover a wide range of different types of joint stack
- Store and organize to avoid lost time searching for dies
- Make it simple to select the next die up or down in each range
- 12 open slots to add new die designs

With this kit, multiple laboratories can design common joint solutions while offering more options for development processes and filling in gaps in existing die libraries.

Manufacturing

All of our dies are manufactured in-house in a two step operation with robotic loading and unloading and rigid quality inspection.
