

RTX SERIES HYDRAULIC TORQUE WRENCH

Used worldwide for low clearance applications due to its combination of powerful torque output and low profile.

RTX SERIES

LOW PROFILE HYDRAULIC TORQUE WRENCH

Our RTX direct-fit, low profile torque wrenches combine high power-to-weight ratio, durability and hands-free operation. The result is a tool that is perfectly suited for low clearance applications that require high torque. Use with the standard set up or customize with high quality accessories.

From design, to manufacturing and calibration, RTX Series is a purpose-built machine. It stands second to none.

AIRCRAFT ALUMINUM ALLOY

Most of the exterior is made up of aircraft-quality aluminum alloy, which provides amazing strength while keeping weight to a minimum.

LARGEST HEX RANGE

Largest range of hex sizes available. Torque output is consistent for any link size. Available in Reduced Radius and 12 point.

HIGH STRENGTH STEEL ALLOY

Heavy duty contact points ensure long tool life.

MULTI-AXIS SWIVEL

Greater range of movement on multiple axis allows the hose to move easier compared to one axis swivels.

AUTOMATIC ENGAGEMENT

The powerhead engages the direct fit ratchet link automatically.

CONNECTS WITH JUST ONE PIN

Using just one high strength pin to connect allows operators to quickly change out link sizes.

REACTION OPTIONS AVAILABLE

The in-line reaction pad works beautifully on most applications. For special applications, Atlas Copco offers outside reaction arms and Alco arms to increase reaction points.

Designs and specifications are subject to change without notice or obligation. Read all safety instructions in the manual before usage.

*RTX Hydraulic Torque Wrench is uniquely designed to have consistent torque output, regardless of hex size link. That means that you don't have to worry about different torque charts when changing direct hex link size.

#Reduced Radius Ratchets (RR) are .062" (1.57 mm) reduction compared to the standard size links.
