Thinking about a career as a Service Technician?

Start your journey at Atlas Copco Compressors
Australia today

ABOUT US!

We are a global company established in 1873, operating in over 180 countries, including Australia. Specialising in manufacturing industrial tools and equipment in Compressor, Vacuum, Industrial, and Power Techniques.

The Compressor Technique Division specialises in compressed air and gas solutions, offering a range of equipment for different industries. We prioritise reliable and efficient performance with over 50 field service technicians across Australia providing local support in each state.

Compressed air plays a pivotal role in both manufacturing and mining industries, often regarded as the 'fourth utility' alongside, water, gas and electricity. Despite its relative obscurity beyond industry circles, the compressed air sector stands as a substantial, profitable and stable industry.

BRAND-NEW TRAINING ACADEMY

At Atlas Copco, you'll get to experience our brand-new Service Academy, a facility dedicated to hands-on training. This academy is designed to empower our employees with practical skills and in-depth knowledge of our products. Our commitment to "Never Stop Learning" ensures our employees will leave the Academy with the confidence and competence to excel in their respective fields.

TESTIMONIAL

“It's a friendly place to work and we have a good team. Management is accessible for any issues.

When you're on the road you get freedom and it's very interesting to see different sites with a good variety of interesting work.

Quality of equipment is high. There is a dedicated technical support department which is a big advantage and the training provided is very good.

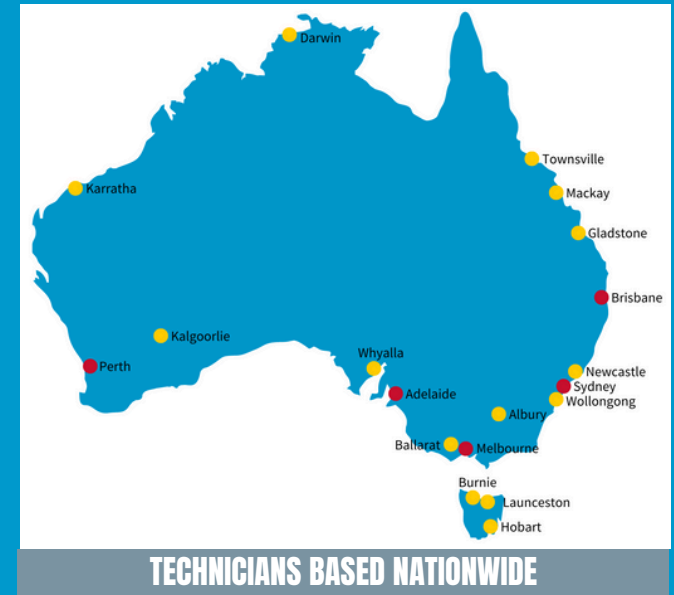

Safety is not just talked about; it is backed up! ”

ENDLESS OPPORTUNITIES

As part of our "Heart for Service" campaign in 2023, one of our local service technicians was awarded a week long trip to Belgium, which included a tour of their Service Academy, factory and warehouse.
